

Our Three Core Pillars.

We Are Data-Driven.

We believe in science to solutions. That includes water monitoring and soil testing. ACWA was founded with the original purpose of water monitoring. While the mission has expanded, it's still a large part of what we do in order to do better watershed planning and track our progress.

We Are Leaders.

With 413 member locations in 87 counties, plus associate members in parallel industries, we are a strong voice for water quality.

We Are Farmer Trusted.

We promote soil health and water quality practices with on-the-ground conservation agronomists and teams dedicated to balancing sustainability and profitability.
